BENJAMIN GREGG

SENIOR SOFTWARE ENGINEER

Over 10 years of engineering experience in bank data integrations, service modernization, scalability, and cost optimization. Contributed to scaling a consumer product from thousands to millions of customers.

SKILLS

Languages & Frameworks: C#, .NET / .NET Core, .NET Framework, ASP.NET MVC, SQL, Python, JavaScript, AngularJS
Cloud & Infrastructure: AWS (EC2, S3, RDS, Aurora, SNS, SQS, Kinesis), Kubernetes, Terraform, Kafka, Cloudflare
Data: MySQL, SQL Server, DynamoDB, Elasticsearch, Redis, Databricks
Tools: Cursor, GitHub, Argo CD, Datadog, incident.io, Optimizely

PROFESSIONAL EXPERIENCE

EarnIn (formerly Activehours) — **January 2015 – October 2026**

Senior Software Engineer — July 2022 – October 2026
Software Engineer — April 2015 – July 2022
Engineering Intern — January 2015 – April 2015

Bank Data Platform & Integrations

- Collaborated on the design and implementation of a provider-agnostic C#/.NET bank data platform with connection redundancy and provider fallback, ultimately supporting **millions of bank connections** and **billions of transactions**.
- Implemented and maintained Plaid, MX, Quovo, Akoya, Capital One, and Wells Fargo integrations, working directly with provider teams on launches, new features, and troubleshooting.
- Delivered **$3M** in annual savings by implementing institution-specific routing to lower-cost bank data providers.
- Built automated, billing-aware connection pruning jobs contributing to **$1.2M** in annual savings without impacting user experience.
- Contributed to bank transaction data-access rewrites for two migrations: SQL Server to Elasticsearch for performance, and Elasticsearch to DynamoDB for cost reduction; validated correctness with parity checks.
- Built full-stack bank troubleshooting tools with C#/.NET APIs, ASP.NET MVC, and AngularJS, enabling customer service agents to investigate and resolve bank connection issues.
- Served as the bank data platform's primary technical owner, co-leading projects and resolving complex production issues; interviewed, onboarded, and mentored engineers on integrations, architecture, and operations.
- Transferred platform development and production ownership to the Bangkok engineering team through knowledge transfer, remaining an escalation contact after the handoff.

Platform Engineering & Efficiency

- Used AI-assisted analysis to identify noisy and oversized logs. Implemented targeted reductions that lowered Datadog costs by **over $50K** annually while preserving diagnostic value.
- Integrated an agentic API to assess users' employment status and inform eligibility for EarnIn products.
- Optimized service resources and scaling policies, saving **tens of thousands of dollars** annually while improving scaling reliability.
- Modernized legacy .NET Framework services, message processors, and scheduled jobs into .NET microservices on Kubernetes, using Cloudflare Workers to gradually shift API traffic during rollout.
- Replaced SQS delivery flows with SNS and Kafka to support multiple downstream consumers, using Optimizely-controlled rollouts to validate behavior during migration.
- Migrated database-intensive scheduled jobs to Python on Databricks using replicated data, reducing production database load; verified matching results before switching production processing.

INTERNSHIPS

Honda North America — IT Support Intern — **May – August 2014**

Marathon Petroleum — Business Analyst Intern — **January – May 2014**

GE Aviation — Data Quality Analyst Intern — **February 2012 – December 2013**

EDUCATION

University of Cincinnati — **September 2010 – June 2016**

Bachelor of Science in Information Technology
GPA: 3.8
